- Malware and viruses
- Too many programs running at once
- A cluttered hard drive
- Outdated software

- Hardware problems

## **How to Clean Up Your PC**

The first step to cleaning up your PC is to identify the source of the problem. If you suspect that your computer is infected with malware or a virus, then you should run a malware scan. There are many different malware scanners available, so you can choose one that best suits your needs.

Once you have removed any malware or viruses, you can start to clean up your hard drive. This involves deleting any unnecessary files and programs. You can also use a disk cleanup tool to remove temporary files and other junk files.

Finally, you should update your software and hardware. Outdated software can contain security vulnerabilities that can be exploited by malware. Updating your software will help to protect your computer from these vulnerabilities.

## **How to Speed Up Your PC**

Once you have cleaned up your PC, you can start to speed it up. There are many different ways to do this, including:

- Closing unnecessary programs
- Disabling startup programs
- Upgrading your hardware
- Overclocking your CPU

By following these tips, you can speed up and clean up your PC or laptop of malware and virus. This will help to improve your computer's performance and protect it from future infections.
